

Home Center Kennel vs. V-Squared™ Kennel  
 6' x 6' panels were loaded with 40# rubber blocks.  
 Deflection was measured after loading each  
 of 5 blocks (200# total).

100% failure was considered when the panel was  
 compromised to the extent that a 40# pet could escape.

(chain link panel purchased at a major home center – 1 3/8" o.d. 19 ga  
 tubing frame - 0.100" diameter mesh, 2 3/8" opening – noted that the  
 tubing was very greasy)

6 x 6 kennel panel strength comparison test
